NEW PRODUCT RELEASE

P&R Technologies is proud to introduce a revolutionary self illuminated obstruction light. The new SpanLite meets FAA and ICAO lighting standards by emitting 32.5 candela light levels. Each light is housed in 12" aluminum spherical ball that incorporates a sealed LED light. The SpanLite needs 50 Amps from the live line and attaches to the power line by strong compression clamps. The SpanLite is perfect for marking remote towers, canyon or river crossings, or marking airports or highways.
