NEW PRODUCT RELEASE

P&R Technologies is proud to introduce their new BriteStripe highly reflective 2-3 foot x 12" inch wide aluminum backed bands for marking utility poles, highway guard rails, industrial support beams and dangerous corners. Each BriteStripe comes in 3 reflective colors, silver, yellow or orange. The flexible, though rigid, aluminum backing allows for quick and easy installation to utility poles or railings and helps prevent squirrels from climbing the poles. The rugged 3M reflective sheeting is very durable and bright. Reflective numbers can be added to better identify location in the city.
