Vehicles

II-Tracker Tacked Robots!!

II-Tracker, Inc. manufactures, markets and sells a variety of specialty tracked and unmanned vehicles for various applications including mining, construction, EOD and emergency response.

GLADIATOR

The Gladiator is a 1,300 lb. robotic rubber tracked platform. It has an 8 horsepower, 4 stroke air cooled diesel engine, measuring 40"x35"x50".

Made of ballistic steel, remote controlled, with video, thermal imaging and motion sensor for surveillance.

The GLADIATOR project was started by the U.S. Marines to promote the use of UGV vehicles by field soldiers.

Two prototype Gladiator vehicles were built in December 2000 through the Joint Projects Office in Redstone Arsenal in Huntsville, Alabama. Further development in underway.
